The DRS8000P is the ultra-compact member of the Industry-leading Digital Recording System (DRS) product family. Optimized for the Telemetry market, the DRS8000P, provides exceptional bandwidth and scalability while maintaining strict compliance with the IRIG-106 Chapter 10 standard.

The DRS8000P accepts one user-installable Interface Board (IFB) providing extensive support for a wide range of telemetry applications. Employing a dual-disk bank architecture, the system provides user-selectable, flexible recording modes: striped (high data rate), mirrored (redundancy), or sequential (extended duration).

With a storage capacity of 2.0 to 4.0 TB and an aggregate data rate of 1600+ Mbps, the DRS8000P is uniquely qualified for the most demanding telemetry requirements. The DRS8000P excels in pre-detect analog, post-detect digital PCM, and direct IF recording, as well as Video, Ethernet, Serial, and MIL-STD-1553 recording.

Building on the success of our robust and reliable Digital Recording Systems, Wideband Systems has raised the bar again – Introducing the Next Generation Digital Recording System – the portable DRS8000P.
